Technical Skill

- **Cloud Platforms:** Microsoft Azure, AWS
- **CI/CD Tools:** Azure Pipelines, Jenkins, GitLab CI/CD
- **Containers & Orchestration:** Docker, Kubernetes
- **Version Control:** Git, GitHub, GitLab, Azure Repos
- **Monitoring & Logging:** Dynatrace, Datadog, New Relic, AWS Cloudwatch
- **Infrastructure Provisioning:** Terraform
- **Networking & Web Infrastructure:** DNS, SMTP, SSL/TLS, CDN (Cloudflare)
- **Web & Hosting Platforms:** WordPress, cPanel, A2 Hosting, Verpex, Bluehost
- **Analytics & Reporting:** Power BI
- **Scripting & Automation: Python** (automation scripts, cloud operations, AWS Lambda)
- **Bash** (Linux shell scripting, deployment automation, cron jobs, system administration)

Education Background

2019-2022

Diploma: Computer Science & Engineering

Institute: Government Polytechnic for women

Percentage: 73%

About Me

DevOps Engineer with 2.5+ years of experience in designing, automating, and managing scalable cloud infrastructure and CI/CD pipelines across AWS and Azure environments. Proficient in containerization and orchestration using Docker and Kubernetes, and Infrastructure as Code using Terraform. Experienced in building reliable deployment pipelines, optimizing system performance, and ensuring high availability of production systems. Strong background in automation using Python and Bash scripting, with expertise in monitoring and incident response using tools such as Dynatrace and Datadog.

Professional Experience

EITB Global Info Solutions Pvt Ltd

Mar 2026- Present

Key Responsibilities:

- Managed cloud-hosted production environments on Microsoft Azure, ensuring high availability, scalability, security, and performance.
- Designed, implemented, and maintained CI/CD pipelines using Azure Pipelines to automate build, test, and deployment workflows.
- Administered Linux-based production systems, performing system configuration, patching, and performance tuning to maintain stability and uptime.
- Configured and managed DNS routing, CDN services, and SSL/TLS enforcement using Cloudflare to enhance application security and traffic optimization.
- Managed domain lifecycle operations, DNS configurations, and certificate provisioning using Cloudflare and cPanel.
- Administered multi-provider hosting infrastructure (Bluehost, Verpex, A2 Hosting), ensuring optimal resource utilization, security, and system reliability.
- Maintained high availability of production web platforms, monitoring performance and implementing preventive maintenance measures.
- Implemented SMTP infrastructure for reliable system notifications and application email delivery.
- Troubleshoot complex production incidents across infrastructure, networking, and application layers, performing root-cause analysis to minimize downtime.
- Ensured service continuity through proactive monitoring, incident response, and performance optimization.
- Automated website and database backups using Python/Bash scripts and scheduled jobs (cron), improving data protection and recovery readiness.
- Utilized Jira for tracking operational tasks, incidents, and coordinating deployments with development teams.

Soft Skill

- Quick learner
- Time Management
- Team collaboration
- Strong problem-solving ability
- Continuous learning and improvement mindset

Hobbies

- Playing chess
- Reading book
- Travelling

Texiio Global Private Limited

Oct 2022- Mar 2025

- Key Responsibilities:
- Managed multi-cloud production infrastructure across AWS and Azure, ensuring high availability, scalability, and performance.
- Designed and maintained CI/CD pipelines using Azure DevOps to automate build, test, and deployment processes.
- Containerized applications using Docker and deployed them on Kubernetes clusters with rolling updates and minimal downtime.
- Provisioned infrastructure using Terraform, enabling repeatable and version-controlled environment deployments.
- Configured and managed networking components including VPCs, subnets, load balancers, and security groups.
- Implemented monitoring and alerting solutions using Prometheus, Grafana, Dynatrace, and Squared Up.
- Automated EC2 instance scheduling using AWS Lambda (Python) and Event Bridge to optimize operational costs.
- Collaborated with development teams to support release activities and Implemented environment-specific configurations for development, staging, and production to ensure consistent deployments across the SDLC.
- Containerized applications using Docker to ensure consistency across development, testing, and production environments.
- Built, optimized, and managed Docker images using Dockerfiles, reducing application deployment issues.
- Deployed and managed containerized applications on Kubernetes clusters in production environments.
- Performed rolling updates and scaling operations with minimal downtime.
- Monitored cluster health and resolved pod failures, resource issues, and connectivity problems.
- Managed Jenkins agents/nodes to distribute build workloads efficiently.
- Troubleshoot pipeline failures and optimized build performance.

Certifications

- Designing and Implementing Microsoft DevOps Solutions(AZ-400)
- Internship in Techno Fly Solutions on Python
- Microsoft Azure Administrator AZ-104 issued by Kodekloud
- Jenkins issued by Kodekloud
- Docker Training Course for the Absolute Beginner issued by Kodekloud
- Terraform Basics Training Course issued by Kodekloud.
- Git Version Control Training — KodeKloud
- Shell Scripting (Linux Automation)
